Auburn Boat-Tail Speedster

The graceful lines of the Auburn Boat-tail Speedster were designed by Gordon Beuhrig, literally to be a "show stopper". First introduced in the auto shows during the summer of 1934, the Auburn was an instant success. This exquisite vehicle captured the media's attention and the imagination of history. In all, some 600 units of this exclusive automobile were built. At this time, in the history of the Auburn, they were largely built by hand.

Today these vehicles are produced at the Prototype Research & Development factory with the same meticulous attention to detail as at Auburn. The frame is jig welded and all mechanical components are jig installed. This produces a full rolling chassis, which is then mated with a hand laminated, steel reinforced fiberglass body, complete with hand formed 14 gauge aluminum hood panels. The body has 12 coats of rubbed base clear to give a deep enduring finish. Specially selected rich leather touch material and the best of the Hartz convertible topping set off the vehicle interior while chromium plated bronze castings and stainless steel detail pieces complete the exterior.

From its inception, this vehicle has served an exclusive clientele. In the thirties it was the darling of the Hollywood set, to such actors as Clark Gable, Errol Flynn, and Al Jolson. Traditionally, Auburns were owned by influential members of society such as doctors, business tycoons, and royalty. Today's reproduction by Prototype Research & Development Ltd. preserves this tradition.
